Table of Contents

Sr. No	Title of Experiment	CO Mapping	Page No
	Group A(Any 6)		
1	Write a Python program to plot a few activation functions that are being used in neural networks.	CO1	7
2	Generate ANDNOT function using McCulloch-Pitts neural net by a python program	CO1	15
3	Write a Python Program using Perceptron Neural Network to recognize even and odd numbers. Given numbers are in ASCII form 0 to 9	C01	22
4	With a suitable example demonstrate the perceptron learning law with its decision regions using python. Give the output in graphical form.	CO1	38
5	Write a python program to recognize the numbers 0, 1, 2, 39. A 5 * 3 matrix forms the numbers. For any valid point it is taken as 1 and invalid point it is taken as 0. The net has to be trained to recognize all the numbers and when the test data is given, the network has to recognize the particular numbers	CO2	29
6	Implement Artificial Neural Network training process in Python by using Forward Propagation, Back Propagation.	CO2	33
	Group B (Any 4)		
1	Write a python program to show Back Propagation Network for the XOR function with Binary Input and Output	CO2	46
2	Write a python program to illustrate ART neural network.	CO4	49
3	Write a python program to design a Hopfield Network which stores 4 vectors	CO3	53
4	Write Python program to implement CNN object detection. Discuss numerous performance evaluation metrics for evaluating the object-detecting algorithms' performance.	CO5	57
	Group C (Any 3)		
1	For an image classification challenge, create and train a ConvNet in Python using TensorFlow. Also, try to improve the performance of the model by applying various hyperparameter tuning to reduce the overfitting or underfitting problems that might occur. Maintain graphs of comparisons.	CO5	67
2	TensorFlow/Pytorch implementation of CNN	CO5	71

4	MNIST Handwritten Character Detection using PyTorch, Keras and Tensorflow	CO6	74
